

Dentistry isn't what it used to be

Thanks to you, patients are happier and our environment is cleaner.

More than 300 dental practices in Central San's service area are using amalgam separators. This has resulted in a **75% reduction in the amount of mercury** flowing into Central San's treatment plant. That's up from the impressive reductions reported previously!

District Source Control staff will continue to inspect dental offices throughout the year. Please work with them to schedule these visits and prepare your staff.
