Is Asbestos in **YOUR** Home?

WHERE CAN ASBESTOS BE FOUND?

Asbestos is present in many common building materials used in private homes and in public buildings. An asbestos containing material cannot be determined by sight. The only way to determine if asbestos is definitely present in a material is through microscopic analysis by an approved laboratory.

IS ASBESTOS DANGEROUS?

The process of removing asbestos can be hazardous. Special techniques and equipment are needed to minimize the risks. Without precautions, you can expose yourself, your family, neighbors and HHW Facility staff to air-borne asbestos. Asbestos fibers are lightweight, so they can stay suspended in the air for many hours. You should consider removal only if encapsulation is not practical. Hire qualified contractors that have been state licensed or EPA certified if removal is necessary.

ASBESTOS WASTE ACCEPTANCE (Friable Asbestos Only)

The Central San HHW Facility accepts friable asbestos containing materials (FACM) only. Friable asbestos is any material containing more than one percent asbestos and that can be crumbled or reduced to powder by simple hand pressure. Forms of friable asbestos can be found in materials and products made prior to the mid 1970's such as: "popcorn" ceiling coatings, uncoated pipe insulations (without the pipe or ducting), appliance insulation, and ceiling tiles. A certification by a licensed laboratory showing that the material contains asbestos above 1 percent, may be required.

PACKAGING ASBESTOS

The FACM must be wetted to prevent dusting. Do not soak or over-wet the FACM to cause free liquids to be present. Asbestos waste must be double-bagged into 6mil (or greater thickness) plastic bags. Fill the bag, remove as much air as possible, twist the opening and use duct tape to seal the bag forming a "gooseneck". Take that bag and place it into the second bag and repeat as the first. Label each double bag boldly with "**ASBESTOS CONTAINING MATERIAL**". This can be done by marking a strip of duct tape on at least two sides of the bags or attach a marked tag at the closure point. Each bag may not weigh more than 50 pounds. The maximum amount of FACM that can be transported at one time is 125 pounds.

NON-FRIABLE ASBESTOS DISPOSAL

Forms of Non-Friable asbestos are materials such as floor tiles, asbestos pipe, transite siding or pipe, and coated pipe insulation. These materials can be taken to the following sites:

RECOLOGY HAY ROAD LANDFILL
6426 Hay Road, Vacaville, CA 95687
(707) 678-4718

WASTE MANAGEMENT ALTAMONT LANDFILL
10840 Altamont Pass Rd. Livermore, CA 94550
(800) 449-6349

****Please call prior to transporting, as facility requirements differ****
